GENERAL CONDITIONS OF SALE

- > The customer accepts, without exception, all the conditions out below gives the order, even if not explicitly stated.
- > Unless otherwise specifically agreed the customer accepts in writing to only stay at our terms therefore nullify or supersede the terms of purchase of the buyer, without prior written notification.
- > Our sales prices, can be subject to changes without further notice due to changes, these are those existing at the time of the shipment of the material ordered.
- > Our terms of delivery, even if agreed in writing, they are not strictly binding us. In the event of a late delivery or shipment, the purchaser may reject all or part of the goods and\or ask for refund in case of direct or indirect damage.
- > The goods, carefully packed, are at the risk and peril of the purchaser, even if shipped prepaid. We do not cover liability for theft, damage or tampering that may occur in shipping the goods.
- > The warrantors, both legal and contractual, is limited to the efforts of eliminating the material or manufacturing flaws due to poor quality, excluding incidental or consequential damages coming from manufacturing flaws.
- > The warranty on BLUELEKTRA SRL is 12 months of operation, but not later than 18 months from the date of delivery, it does not include normal wear and tear, neither the consequences due to an incorrect installation, or to the malfunctions and failures due to neglect or inexperience, and can even be called when the purchaser has tampered with the material, without our consent.
- > The delivery of the material means, made and accepted with the agreement of our retention of title to the total fulfillment of payment obligations with us waiting.
- > In case of late payment agreed, default interest will be charged on the basis of the bank rate liabilities in force at the time of the delay, plus three points.
- > Complaints must be notified in writing within eight days of receipt, after this point there are no rights for a complain or refund.
- > We do not accept returns of materials unless previously authorized in writing by the BLUELEKTRA SRL's Director.
- > Any material returned must be sent to our office, shipment is paid by the customer.
- > The goods being manufactured will be credited at purchase price and burdened with a reimbursement of administrative and tax by 10% (ten percent).
- > For any dispute the competent Court of Milan was elected as our legal address the party accept their conditions.

The information and technical data of this document are subject to change; BLUELEKTRA SRL reserves its right to change any specifications without further notice at any time, pending on the evolution of materials and technologies.

The product installation must be performed in accordance with the applicable laws.

BLUELEKTRA SRL assumes no responsibility regarding the use of the products, this provides specific rules on the environment and\or its installation, to follow these is the responsibility of the installer.

GENERAL INFORMATIONS

CURRENT TRANSFORMER

APPLICATION

The Current transformers for low-voltage equipments are designed to allow the measurement of very high currents using normal reading instruments, and / or for the protection of electrical circuits in the most varied applications. They are built for secondary currents of 1A and 5A (different secondary currents can be made on request). The range of primary currents influence the size of the transformers and may vary from 1A up to 6000 A.

OPERATING CONDITIONS

The transformers are designed to operate in a protected ambient with climatic conditions of moderate temperature (standard construction) or tropical (on request). The thermal current is measured at 100% of rated current, while a current range of 150%, 200% or 400% is possible following a specific customer's request. The temperature range of operation is defined between -25 °C and + 40 °C; while the relative humidity should be of about 85% as a maximum.

PROJECT

These current transformers are intended for single-phase low voltage and transform the current flowing through the primary circuit into a current in the secondary circuit (normally lower) with a level of accuracy specified by the relevant standards. Their insulation class is of type E; the windings of the circuits are enclosed in plastic housings made in material resistant to heat, fire, fungi and termites and are produced for different types of primary circuit that use busbars or cables. As mentioned above, the range of the primary current goes from 1A to 6000A (other flow can be realized on specific request). Models TN, TR, TS, TA have a sealable terminal cover for closing the secondary terminals (supplied for some types, optional on others)

MOUNTING

The transformers are permanently marked with the sense of input and output of the current on the two sides of the housing; They have accessories that allow the fixing on horizontal or vertical bars, on cables, on DIN bars, directly on the panels or plates by means of screws; They can be mounted in any position but **cannot be used as supporting elements for the current busbars**. The details of the different installation options are displayed chapter by chapter.

OPERATION

Current transformers must not work with the secondary winding open because of dangerous surges that may ensue. These overvoltages are proportional to the ratio of the transformer and then to the number of the turns and the section of the core. You could also have an undesirable magnetization of the core, which can impair the precision of the transformer. In case of maintenance, to short circuit the secondary. To avoid the problem against accidental openings of the circuit must be to use the electronic circuit of automatic protection (ACC-PROTEL) that with automatic and instantaneous intervention keeps the voltage below 15V RMS.

PACKING, TRANSPORT, STORAGE

The current transformers must be packed in a convenient way to avoid damage in transit, especially for long distances; given their weight, it is recommended not to place delicate items below them. They must also be stored in a dry and with temperatures between -25°C and + 80 °C.

HANDLING AND DISPOSAL OF PRODUCTS USED

Thanks to the materials and technology used in their manufacture, the transformers do not present a danger to the environment. The products used or damaged must be removed by segregating the various parts of steel, nonferrous metals, plastics and rubber. Parties so segregated must be recycled or disposed of by specialized companies.

CERTIFICATION

BLUELEKTRA is able to provide certification of the metering equipment if the Technical Department of Finance requests it. While the certification of the entire plant is to be requested to the competent UTF local offices. In the case of a group of three measurement, systems consisting of 3 current transformers and a kWh-meter, 5 verification certificates are necessary. When the measurement group to be certified is a 2 systems, 4 certificates are necessary as that the CTs involved are only two.

This certificate, as well as the test report (accuracy curve) must be requested when ordering. The transformer should in fact be present in the company for the collection of data.

DEFINITIONSThermal current (I_{th}):

is the highest primary current (effective value) the transformer can withstand for 1 second without causing damage due to excessive overloads, with secondary shorted.

Dynamic current (I_{din}):

is the highest primary current (peak value) that the transformer can withstand without causing damage due to electromagnetic efforts, with secondary shorted.

Maximum operating voltage:

is the highest value of the voltage (rms) that the transformer can withstand.

Test voltage:

is the voltage at power frequency, for the isolation, that the transformer bears for 1 minute between primary and secondary to ground, and between the secondary to ground.

Safety factor (FS):

is the ratio between the value of the primary current which causes saturation of the core and the value of the nominal primary current. Lower is the value of "FS" and more the instrument is protected.

DIMENSIONING THE LOAD

The total load that will be connected to the transformer, must take into account the consumption of the connected device, the self-consumption of the transformer, as well as the losses due to the connection cables. Below the table upon consumption of the cables in relation to their length and section:

Cable section mm ²	Secondary 5A					Secondary 1A						
	10 m	20 m	40 m	80 m	10 m	20 m	40 m	80 m				
1	0,36	0,71	1,43	2,14	2,14	2,85	3,57					
1,5	0,58	1,15	2,31	3,46	4,62	5,77	0,23	0,46	0,92	1,39	1,85	2,31
2,5	0,36	0,71	1,43	2,14	2,86	3,57	0,14	0,29	0,57	0,86	1,14	1,43
4	0,22	0,45	0,89	1,34	1,79	2,24	0,09	0,18	0,36	0,54	0,71	0,89
6	0,15	0,30	0,60	0,89	1,19	1,49	0,06	0,12	0,24	0,36	0,48	0,60
10	0,09	0,18	0,36	0,54	0,71	0,89	0,04	0,07	0,14	0,21	0,29	0,36

Below the table of the maximum permissible load in amperes, of copper bars under current rules:

Dimension	Rated current (In) A			Dimensione	1 bar		
	1 bar						
20x5 mm	325	560		40x10	715	1290	1770
20x10 mm	427	925	1180	50x10	852	1510	2040
30x5 mm	379	672	896	60x10	985	1720	2300
30x10 mm	573	1060	1480	80x10	1240	2110	2790
40x5 mm	482	836	1090	100x10	1490	2480	3260

PRECISION CLASS FOR MEASURING CURRENT TRANSFORMERS

Under the current rules, the limits of current error and the error limits of the phase angle of each transformer, must be included between the data in the table:

Accuracy class	Current error (ratio) in percent (+/-) of the rated current under specified				Angle error (+/-) as a percentage of rated current shown below							
	5	20	50	200	Minutes	5	20	50	200	Centiradians	5	20
0,1	0,4	0,2	0,1	0,1	15	8	5	5	0,45	0,24	0,15	0,15
0,2	0,75	0,35	0,2	0,2	30	15	10	10	0,9	0,45	0,3	0,3
0,5	1,5	0,75	0,5	0,5	90	45	30	30	2,7	1,35	0,9	0,9
1	3	1,50	1,0	1,0	180	90	60	60	5,4	2,7	1,8	1,8
3	da $0,5 \text{ ln} a 1,2 \text{ ln} = \pm 3$				no prescription							

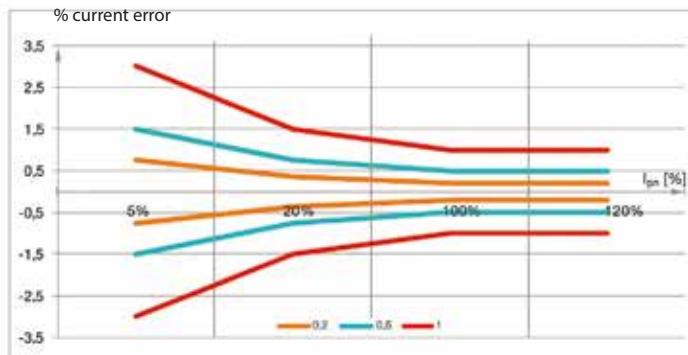

In many systems, the application requires transformers class 0.2S or 0.5S.

It is therefore necessary that they meet the required values even from 1% of the nominal load as the table:

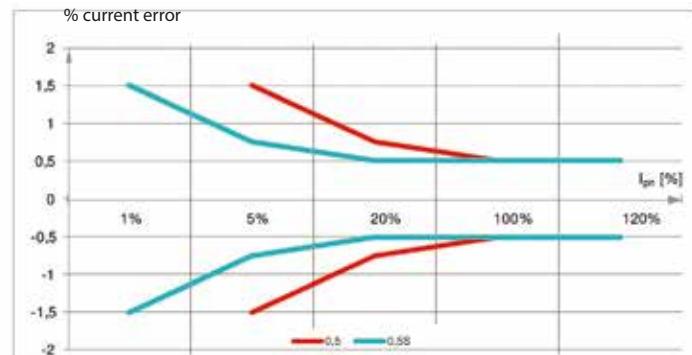

Accuracy class	Current error (ratio) in percent (+/-) of the rated current under specified					Angle error (+/-) as a percentage of rated current shown below							
	1	5	20	50	200	Minutes	1	5	20	50	Centiradians	1	5
0,2 S	0,75	0,35	0,2	0,2	0,2	30	15	10	10	0,9	0,45	0,3	0,3
0,5 S	1,5	0,75	0,5	0,5	0,5	90	45	30	30	2,7	0,35	0,9	0,9

CHARACTERISTIC CURVE OF ERRORS

Class 0.2 - 0.5 to 1 0.5

Comparison between class 0,5 and class 0,5S

PRECISION CLASS FOR PROTECTION CURRENT TRANSFORMERS

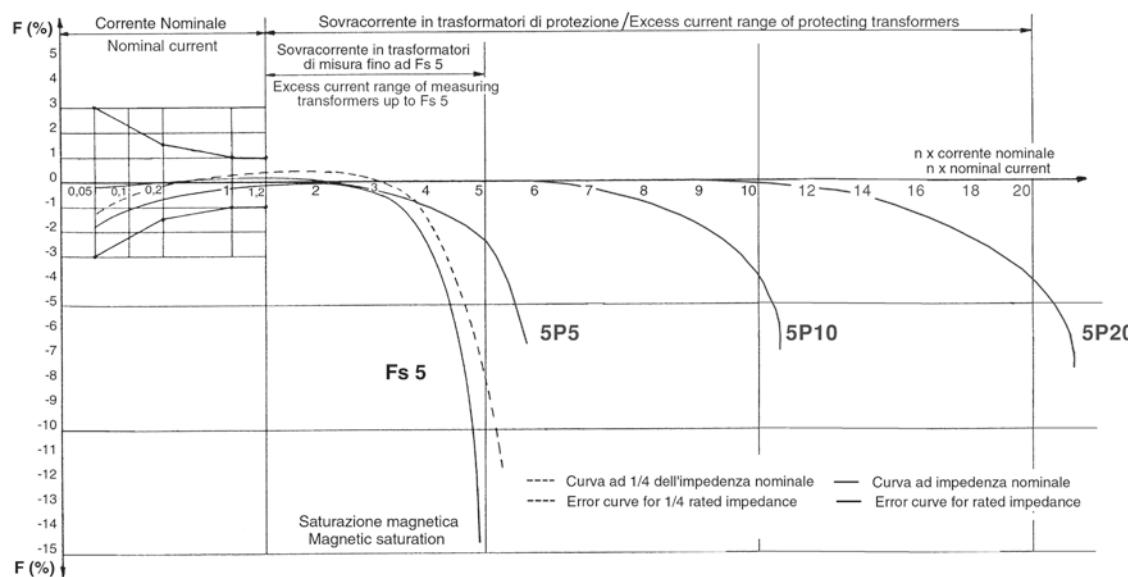

Under the current rules, the limits of current error and the error limits of the phase angle of each transformer must be included between the data in the table:

Accuracy class	Errore di corrente (rapporto) in percento (+/-) della corrente nominale sotto indicata	Current error (ratio) in percent (+/-) of the rated current under specified		Angle error (+/-) as a percentage of the rated current under specified
		Minutes	Centiradians	
5P	1	60	1,8	5
10P	3			10

In some protection systems, where the characteristics of the current transformers depend on the overall design of the equipment, additional requirements are set out in the rules for class PX.

With this class, identifies a current transformer with low leakage reactance, for which the knowledge of the secondary excitation characteristic, the resistance of the secondary winding, the resistance of the benefit and secondary turns ratio, are sufficient to evaluate its performance in relation to the type of protection relay with which must be used.

SATURATION CURVES OF SAFETY AND PROTECTION TRANSFORMERS

RESISTIVE NOMINAL PERFORMANCE (RB)

Nominal value of the resistive performance connected to the secondary, in ohms.

STRENGTH OF THE SECONDARY WINDING (RCT)

DC resistance of the secondary winding, in ohms, reported at 75 °C or other temperature if specified.

NOMINAL F.E.M. OF KNEE POINT (EK)

The minimum sinusoidal F.E.M. (effective value at rated frequency, when applied to the secondary terminals of the transformer with all other terminals open circuit, determine, with an increase of 10%, an increase of the effective value of the excitation current not exceeding the 50% (the effective f.e.m. of knee point will be \geq to the nominal f.e.m. of knee point)).

NOMINAL TURNS RATIO

The prescribed ratio between the number of primary turns and the number of turns in the secondary. Example 1: 1/600 (one primary turn with six hundred secondary turns).

Example 2: 2/1200 (current transformer ratio similar to the previous example that uses two primary turns, 600 turns).

TURNS RATIO ERROR

The difference between the nominal and effective turns ratio, expressed in %.

$$\text{Error turns ratio (\%)} = \frac{\text{effective turns ratio} - \text{nominal turns ratio}}{\text{Nominal turns ratio}} \times 100$$

DIMENSIONING FACTOR (KX)

Factor assigned by the buyer to indicate the multiple of the rated secondary current (I_{sn}) that you may have in case of failure, including safety factors, up to which the transformer must meet the requirements of operation.

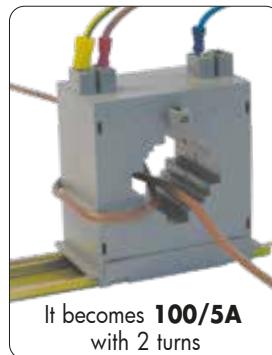

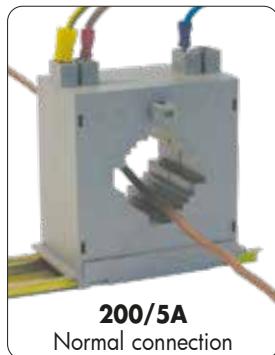

- Class 0.5 is required for the energy meters.
- Class 1 is required for measures and unofficial energy counters.

HOW TO CALCULATE THE DIAMETER OF A CABLE

To go back to the diameter of a cable (for example) of 95 mm², reference should be made to the following formula:
 Section rxrx = 3.14 ie $3.14 \times r^2$ where: $r = \sqrt{\text{sezione}} / 3.14$; $r = \sqrt{95} / 3.14 = \sqrt{30.25} = 5.5$ mm, therefore, the radius is 5.5 mm Diameter = $r + r$ then the diameter is equal to $5.5 + 5.5$ mm = 11 mm (diameter of only copper, to which the thickness of the insulating material must be added, Ø total about 20 mm)

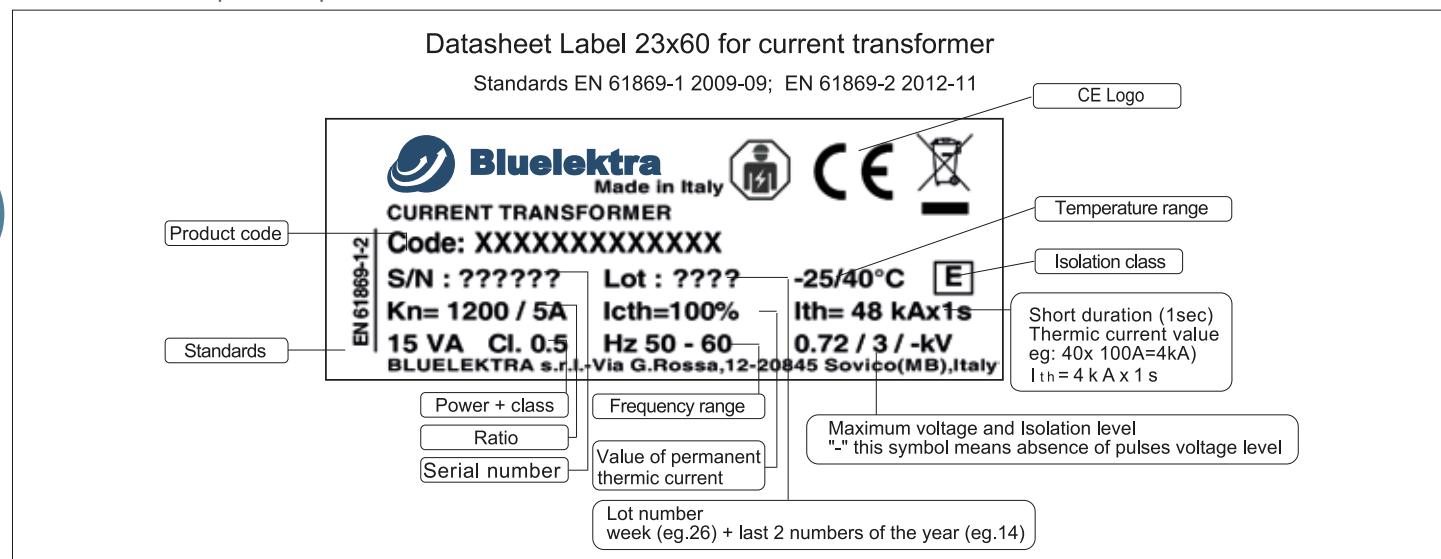

USING THE SAME TRANSFORMER, FOR DIFFERENT CAPACITIES

Having dire need, you can use the same current transformer getting different primary currents; because in fact the effective primary current is the ratio between the rated current and number of turns, you can reduce the value of the primary current (while maintaining the values of the secondary current, performance and accuracy class) in the following way:

PRODUCT LABEL SYMBOLOGY

Below is an example of explanation

ELECTRICAL CHARACTERISTICS

Standards reference : All current transformers are built in accordance with the new European standards IEC 61869-1 and IEC 61869-2 (which replace the old standards IEC 60044-1).

Rated primary current (I_{pn})

1A ..6000A to be specified

Rated secondary current (I_{sn})

1A o 5A or other to be specified

Accuracy class for measuring

3 - 1 - 0,5 - 0.5S - 0,2 - 0,2S - 0,1

Accuracy class for protection

5P5 - P10 - P15 - P20 - 10P5 - P10 - PX to be specified

Operating Frequency

50..60Hz (other on request)

Rated continuous thermal current (I_{th})

100%

Rated thermal short circuit (I_{th})

40In/1s

Rated dynamic current (I_{dyn})

2,5x I_{th}

Safety factor (FS)

≤ 2.....≤ 15 according to the type and range

Nominal Power

1...50VA depending of model

Maximum allowable temperature on f the cable or bar

+115°C

INSULATION

Dry transformer with air insulation

Class E, where the limit of the over temperature on the windings is K = 75 ° C

Resin insulation on request

0,72kV (1,2 kV on request)

3kV (6 kV on request)

Maximum operating voltage (U_m)
 Test voltage

ENVIRONMENTAL CONDITIONS

To use in a protected environment with an altitude up to 2000m above sea level. The dew is permissible

+20°C +/-1%

-25°C ...+40°C

-25°C ...+80°C

$\leq 85\%$

HOUSING

Polycarbonate self-extinguishing material

V0

Protection degree

IP30

TERMINALS

Protection degree

s2(l) secondary winding output

Material

Value of torque for screws M4x6

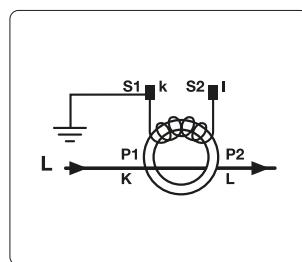

Value of torque for nuts M4

Value of traction for M4x6 screws

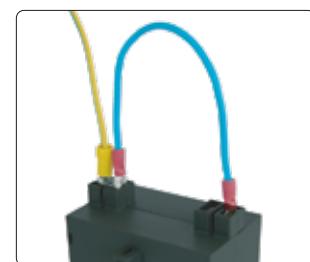

Limit of elasticity for M4x6 screws

Marking terminals

CONNECTIONS

During installation, ensure precise sense input (P1-K) and output (P2-L) of the primary current. In models with primary and secondary current on terminals, do not invert the two connections. It is always advisable grounding the transformers. If you need to disconnect the load from transformers with the system on, **it's necessary to short-circuit the two secondary terminals of the transformer.**

HOW TO ORDER

In order to place an order, you must include the following data:

- Transformer type (size of the bar or cable to use; maximum dimensions)
- Primary current (Ipn)
- Secondary current (Isn)
- Power in VA
- Accuracy class for measuring or protection
- Safety factor (FS5 or FS10 where required);
- Climatic conditions in which you will install the transformer; moderate or tropical (for moderate climate is considered standard for tropical climate is to be specified when ordering)
- Number of pieces
- Possible particular executions

WARRANTY

The manufacturer provides a warranty of 12 months from the date of commissioning, but not more than 18 months from the date of delivery. The manufacturer is not liable for defects or damage arising from incorrect transport and never after the reception of the transformers by the customer; by a bad preservation; by incorrect installation or improper selection of the transformer for an electrical specific system.

CURRENT TRANSFORMERS – TR SERIES

Range of transformers with standard dimensions in which the short circuit on terminals or the connection of grounding can be made using the double fast-on (present in the socket of accessories), or by wiring the two wires on the same terminal.

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a socket containing a series of accessories that depending on the model, allow various types of fixations:

- The mounting on DIN rail EN 50022 is performed using the fork accessory
- The wall mounting using the two brackets
- The direct mounting on the cable or on the bar, using screws

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

Place the transformer on a DIN rail, insert the fork in their seats and push it as shown in the figures

Wall fixing

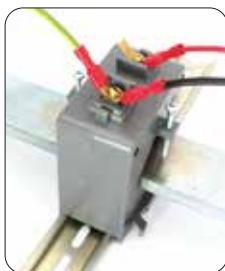

Insert the brackets into the proper places as shown in the figure, then secure them to the wall with two screws (not supplied)

Mounting on cable or primary busbar

Fixing possible for all codes, using the two screws supplied with the transformers, as shown in the figure. In this case, be sure to protect the tips to avoid the piercing of the primary cable.

WIRING INSTRUCTION

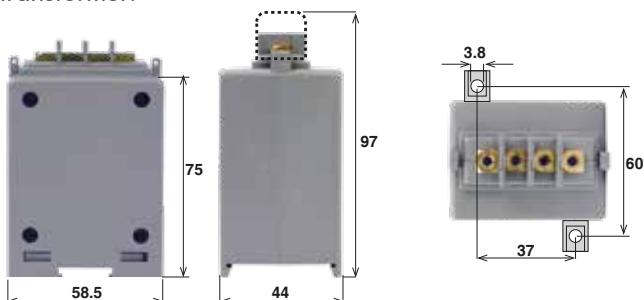

The cables of the secondary current must be connected to each of their terminal, S1 and S2. The cable/bar of the primary current must be inserted into the transformer paying attention to the flow direction of the current, which must always be in the direction P1 → P2.

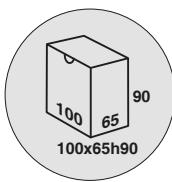

The double fast-on terminals as accessory, allows you to make a short circuits when it is necessary to disconnect the load from the transformer, so as not to damage the transformer or the operator, or make the ground if you do not want to use the same terminal used for connection to the load.

TRP1E

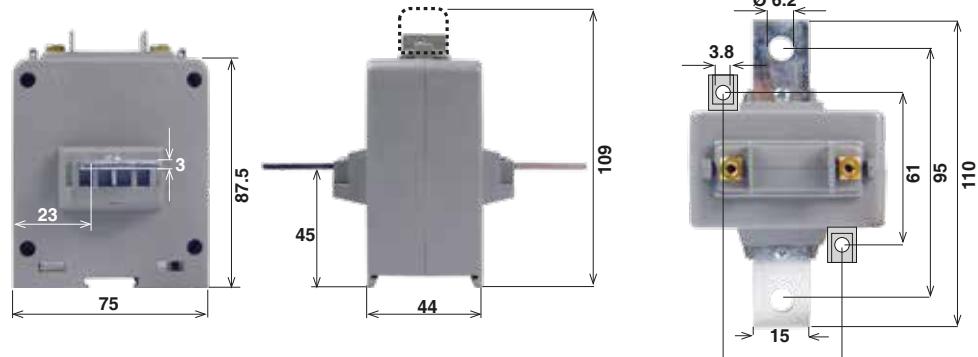

Transformer with wounded primary where the primary and secondary currents are present on the terminals on top of the transformer.

**Measuring transformers**

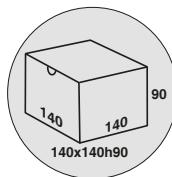

Primary current	Class	Power	Secondary current	Secondary current	Weight
A		VA	5A	1A	Kg
1	1	3	TRP1E-001A5-1-3VA	TRP1E-001A1-1-3VA	0,40

TRP2

Primary wounded Transformer where the primary current is present on the central bar incorporated in the transformer.
 -with primary current from 50A to 80A the central bar has 15x3x110mm dimensions and fixing holes 6mm diameter
 -with primary current from 100A to 300A the central bar has 25x3x135mm dimensions and fixing holes 10mm diameter
 -with primary current from 400A to 500A the central bar has 25x5x135mm dimensions and fixing holes 10mm diameter

Insulation class B

CURRENT TRANSFORMERS - TM SERIES

TRANSFORMERS FOR ELECTRONIC USE - TM EL ... SERIES

Range of transformer characterized by a small size, indicated in all those installations where space has considerable importance; the presence of Fast-On (6.3mm) terminals, also allows a significant reduction of wiring time.

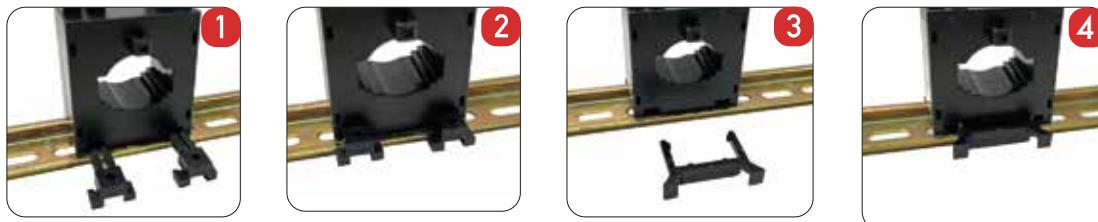

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a socket containing a series of accessories that depending on the model, allow various types of fixations;

- The mounting on DIN rail EN 50022 is performed using the base
- The wall mounting using the two brackets or the basis mentioned above
- The direct mounting on the cable or on the bar, using screws

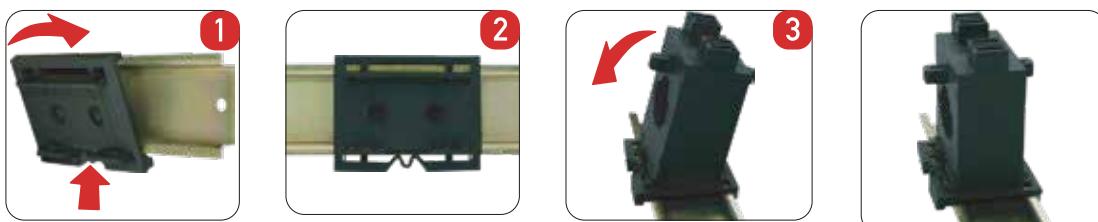

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

For codes TM1-TM3-TM4

Place the transformer on a DIN rail, insert the brackets into the proper places as shown in the figure (1-2)
insert the fork in their sats and push it as show in the figure (3-4)

For codes TM5

Place the choice base on the bar and press as shown in figures (1-2)
Position the transformer on the base previously assembled and press as shown in figure (3)

Wall fixing

For codes TM5

Secure the base to the wall with two screws (not supplied), then attach the transformer as shown in the previous figures.

For the code TM1-TM3-TM4-TM6.

Insert the brackets into the proper places as shown in the figure and fasten them to the wall with two screws (not supplied).

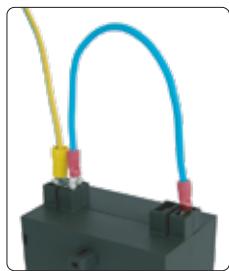

Possible for all codes using the two screws provided together with the transformers as shown in figure.
When you have to fix a cable, it is recommended to protect the tip of the screws properly, in order to not pinch the cable.

WIRING INSTRUCTIONS

Connect the cable S1 in one of the two terminals of the corresponding side, and the cable S2 in one of the two cables of the opposite side. The selected terminal is irrelevant since the two adjacent Fast-On terminals are internally connected. The cable / bar of the primary current must be inserted into the transformer paying attention to the flow direction of the current, which must always be in the direction P1 -> P2.

The double terminal lets you make a short-circuit when it is necessary to disconnect the load from the transformer, so as not to damage the transformer or the operator.
It is also possible to make the grounding if you do not want to use the same Fast-On terminal used for the connection to the load.

TRANSFORMERS FOR ELECTRONIC USE

they are used for current measurements from 25A to 600A (nominal primary current). The main feature is the high number of turns of the secondary winding, which allows to have a very low secondary current, suitable for an electronic measurement circuit which can be detected as voltage on a resistor. This resistor of low power and low cost is directly mounted on the printed circuit.

Have isolation voltage of 3 kV between primary and secondary, and operating frequency of 50/60Hz.

Applications:

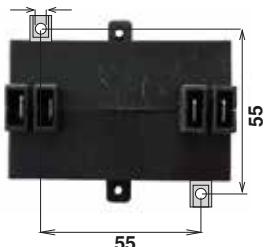

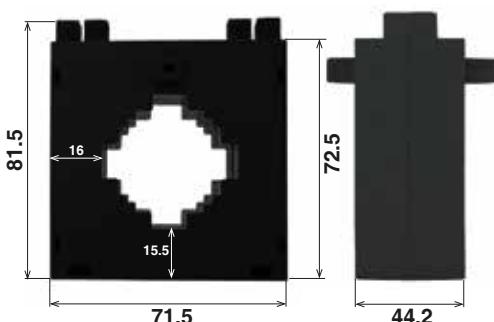

- Current sensor for protection circuits and control of devices such as rectifiers bridges, motors, UPS and similar.
- Current sensor for measuring instruments (current probe).

Reports or technical data different than the proposed, can be made on request .

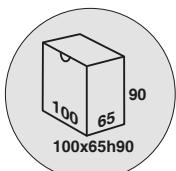

BUSBAR CURRENT TRANSFORMERS – TM E SERIES TRANSFORMERS FOR ELECTRONIC USE – TM EL SERIES

CURRENT TRANSFORMERS - TN SERIES

PROTECTION TRANSFORMERS - TN P ... SERIES

Range of transformers characterized by small size indicated in all those installations where space has considerable importance and double terminals in opposition.

ASSEMBLY INSTRUCTIONS

Together with the transformer it is provided a sachet containing a series of accessories, which depending on the model allow various types of fixing:

- The mounting on DIN EN 50022 requires no accessories, but simply by pressing upon the transformer thanks to the presence on the same, on the bottom side, the adequate fastening system.
- The wall mounting using the two brackets, or, in the case of code TN60, the special dedicated accessory.
- The direct mounting on the cable or on the busbar, using screws.

These fasteners must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer, having to remove it.

Mounting on DIN rail

Place the transformer on the DIN rail and press it as shown in figures.

Wall fixing

Through the appropriate base for the code TN60, secure the base to the wall with 4 screws (not supplied), then insert the transformer in the slaid as shown.

Using the two brackets for the code TN22. Insert the brackets into the proper place as shown in the figure and fasten them to the wall with two screws (not supplied).

Mounting on cable or primary busbar

Fixing possible for all codes, using the two screws supplied with the transformer, as shown in figure.

WIRING INSTRUCTIONS

Connect the cable S1 in one of the two terminals of the corresponding side; and the cable S2 in one of the two terminals of the opposite side. The selected terminal is irrelevant since the two terminals in opposition are internally connected.

The cable / busbar of the primary current must be inserted into the transformer paying attention to the flow direction of the current, which must always be in the direction P1 → P2.

The double terminal lets you make a short-circuit when it is necessary to disconnect the load from the transformer, so as not to damage the transformer or the operator. It is also possible to ground it if you do not want to use the same terminal used for connection to the load.

The terminals of this range have been designed with a sufficient protection degree against accidental contact. Is available on request, however, the 55PSATCS3C sealable terminal cover.

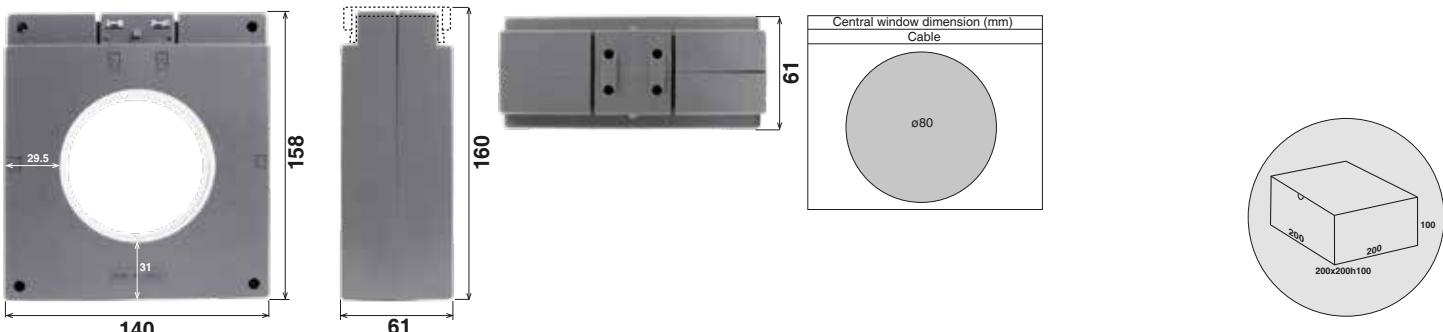

PROTECTION TRANSFORMERS

The current transformer used as a current generator for protection relays, has characteristics different from those of the measurement transformer. In fact to this range it is required a saturation of the magnetic circuit with primary currents $5 \times I_n$, whereas for the protection transformer is necessary that the value of the secondary current follows the increasing of the primary current up to 10, 15 or 20 times the I_n , guaranteeing thus the intervention of the relay to the provided fault current. It is important to do not load the transformer with a performance P, higher than the stated, in order to do not change the saturation of transformer, and keep unchanged the following formula:

$P = R \times I^2$ where P = load on CT; R = resistance of the relay + resistance of the cables; I = rated secondary current of the C. Ratio or technical data different from those proposed, can be made on request.

TN18

Transformer suitable for primary current by cable with maximum diameter 80mm.
 Sealable terminal cover NOT included on request: code 55PSATCS3C.

CURRENT TRANSFORMERS – TS SERIES

PROTECTION CURRENT TRANSFORMERS – TS...P SERIES

Range of transformers characterized by a very small dimensions, indicated in all those installations where space has considerable importance, and by a double terminals in opposition.

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a socket containing a series of accessories that depending on the model, allow various types of fixations:

- The mounting on DIN rail EN 50022 requires no accessories, but simply by pressing upon the transformer, thanks to the presence on the bottom side a suitable fixing system.
- The wall mounting using the two brackets
- The direct mounting on the cable or on the bar, using screws

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

Position the transformer on the DIN rail and press as shown in Figures 1 and 2.

Wall fixing

Insert the brackets into the proper places as shown in the figure, then secure them to the wall with two screws (not supplied).

33

Mounting on cable or primary busbar

Fixing possible for all codes, using the two screws supplied with the transformers, as shown in the figure. In this case, be sure to protect the tips to avoid the piercing of the primary cable.

WIRING INSTRUCTION

Connect the cable S1 in one of the two terminals of the corresponding side; and the cable S2 in one of the two terminals of the opposite side. The selected terminal is irrelevant since the two terminals in opposition are internally connected. The cable /busbar of the primary current must be inserted into the transformer paying attention to the flow direction of the current, which must always be in the direction P1 → P2.

The double terminal lets you make a short-circuit when it is necessary to disconnect the load from the transformer, so as not to damage the transformer or the operator. It is also possible to ground it if you do not want to use the same terminal used for connection to the load.

55PSATCS1C

55PSATCS2C

The terminals of this range have been designed with a suitable protection degree against accidental contact. Is available on request, however, the sealable terminal cover 55PSATCS1C and 55PSATCS2C.

PROTECTION TRANSFORMERS

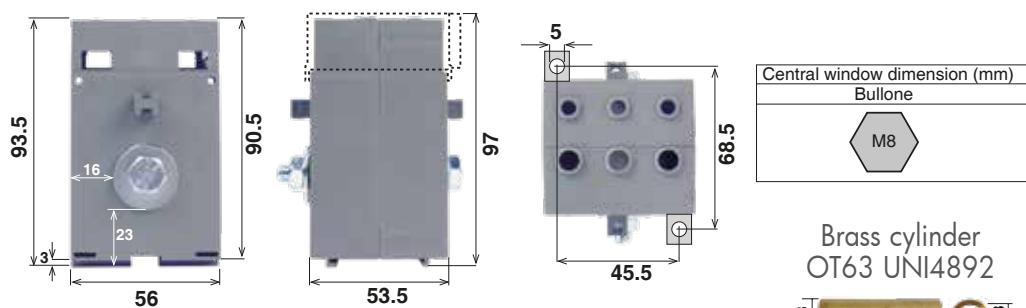

The current transformer used as a current generator for protection relays, has characteristics different from those of the measurement transformer. In fact to this range it is required a saturation of the magnetic circuit with primary currents $5 \times I_n$, whereas for the protection transformer is necessary that the value of the secondary current follows the increasing of the primary current up to 10, 15 or 20 times the I_n , guaranteeing thus the intervention of the relay to the provided fault current. It is important to do not load the transformer with a performance P, higher than the stated, in order to do not change the saturation of transformer, and keep unchanged the following formula:

$$P = RxI^2 \text{ where } P = \text{load on CT}; R = \text{resistance of the relay} + \text{resistance of the cables}; I = \text{rated secondary current of the C.}$$

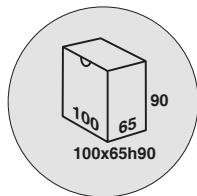

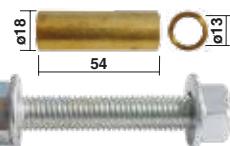

Ratio or technical data different from those proposed can be made on request.

TS08

Transformer suitable for primary current by central cylinder with bolt M8.
 Sealable terminal cover NOT included on request: code 55PSATCS2C.

Brass cylinder
OT63 UNI4892

CURRENT TRANSFORMERS – TB SERIES

Range of transformers characterized by small size indicated in all those installations where space has considerable importance and double terminals in opposition.

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a socket containing a series of accessories that depending on the model, allow various types of fixations;

- The mounting on DIN rail EN 50022 is performed using the base
- The wall mounting using the two brackets
- The direct mounting on the cable or on the bar, using screws

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

For codes TB1-TB2-TB3-TB4-TB5

Place the transformer on a DIN rail, insert the brackets into the proper places as show in the figure (1-2) insert the fork in their sats and push it as show in the figure (3-4)

For codes TB1-TB2-TB3-TB4-TB5

Place the transformer on a DIN rail, insert the brackets into the proper places as show in the figure (1-2) insert the fork in their sats and push it as show in the figure (3-4)

Wall fixing

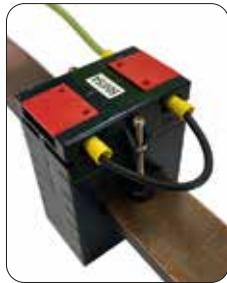

Insert the brackets into the proper places as shown in the figure and fasten them to the wall with two screws (not supplied).

Possible for all codes using the two screws provided together with the transformers as shown in figure. When you have to fix a cable, it is recommended to protect the tip of the screws properly, in order to not pinch the cable.

WIRING INSTRUCTIONS

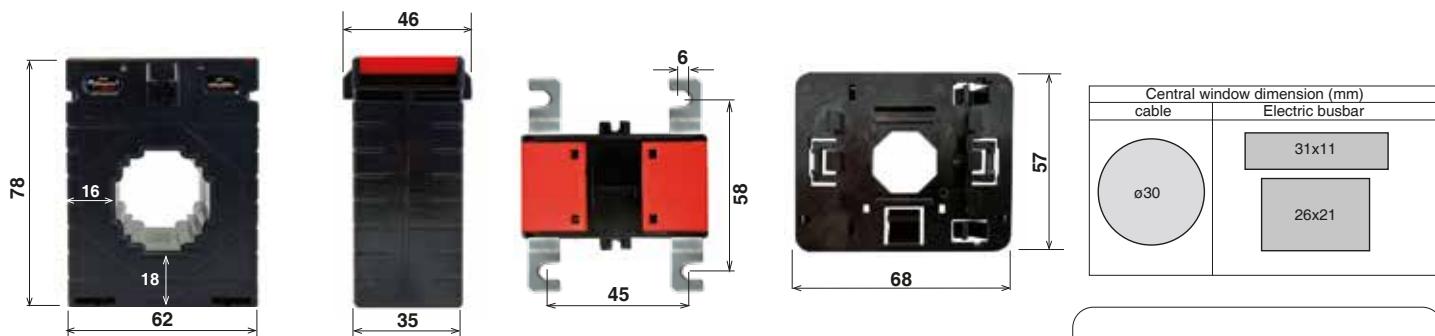

Connect the cable S1 in one of the two terminals of the corresponding side, and the cable S2 in one of the two cables of the opposite side. The selected terminal is irrelevant since the two adjacent Fast-On terminals are internally connected. The cable / bar of the primary current must be inserted into the transformer paying attention to the flow direction of the current, which must always be in the direction P1 -> P2.

The double terminal lets you make a short-circuit when it is necessary to disconnect the load from the transformer, so as not to damage the transformer or the operator.
It is also possible to make the grounding if you do not want to use the same Fast-On terminal used for the connection to the load.

TB1

Transformer suitable for primary current by cable with a maximum diameter of 30mm, by horizontal bar 30x10mm, 25x20mm.

**Measuring transformers**

MODULAR CURRENT TRANSFORMERS - TD SERIES

Range of transformers characterized by a 2 DIN modules EN 50022 housing, that allows quick mounting on DIN rails.

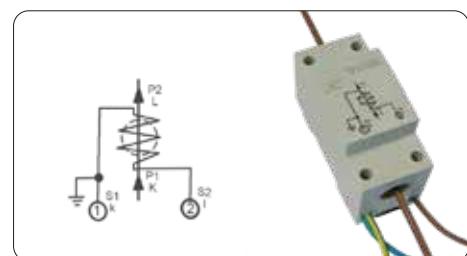

ASSEMBLY INSTRUCTIONS

Mounting on DIN rail EN 50022 must be carried out in the manner indicated in the figure; first insert the inelastic hook, then rotate the housing of the transformer until it locks. Proceed in reverse order of disassembly. No additional tools are required except for the release of the transformer having to remove it.

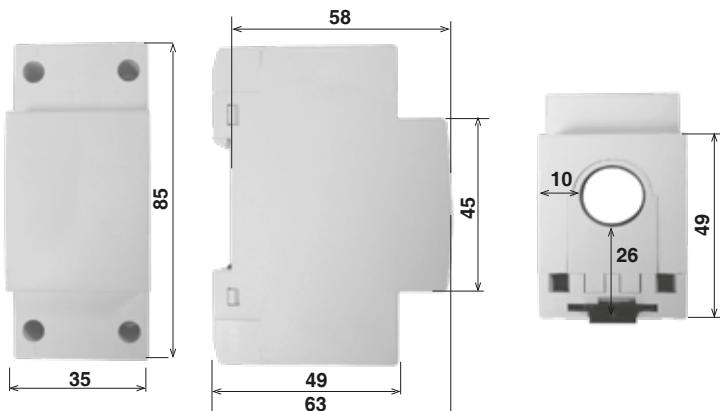

WIRING INSTRUCTIONS

Connect the two wires to terminals 1 and 2; the ground can be made using the terminal 1 (S1). The cable of the primary current should be inserted in the central hole paying attention to the direction of flow of the same current as shown in FIG.

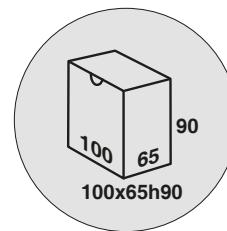

TD15

Transformer suitable for primary current by cable with a maximum diameter of 15mm.

Central windows dimension (mm)	
Cable	Electric busbar
ø15	14,5x2
	14x3
	13x5

SUMMATION CURRENT TRANSFORMERS - TSO / TDSO SERIES

Range of transformers suitable to obtain the vector sum of the currents on multiple lines of a single voltage system.
Highest voltage for insulation: 0.72kV / 3 kV.

If the primary currents are different each other, specify the relative ratio when ordering.

ASSEMBLY INSTRUCTIONS

Together with the transformer it is provided a socket containing a series of accessories, which depending on the model allow various types of fixation:

- The mounting on DIN rail EN 50022 do not requires accessories, but simply by pressing it upon the transformer, thanks to the presence on the bottom of the transformer a suitable fixing system.

- Wall mounting using the two brackets (feet).

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer, having to remove it.

Position the transformer on the bar and press as shown in Figures 1 and 2.

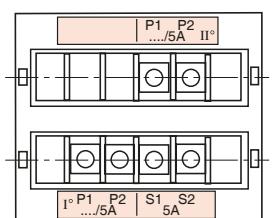

Wall fixing

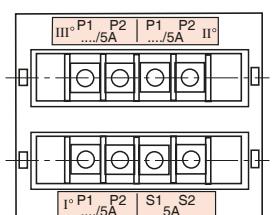

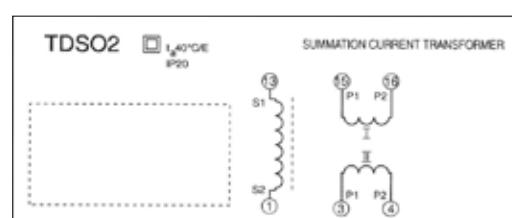

Using the two brackets supplied. Insert the brackets into the proper places as shown in figure; then secure them to the wall with two screws (not supplied).

WIRING INSTRUCTION

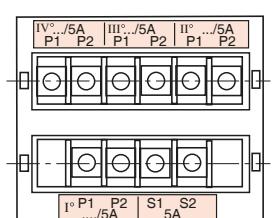

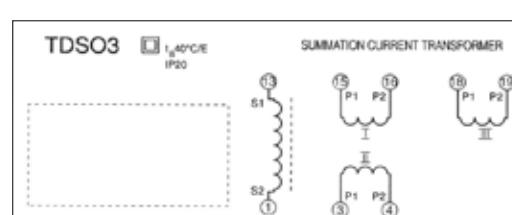

Connect the wires in the respective terminals as shown on figures.

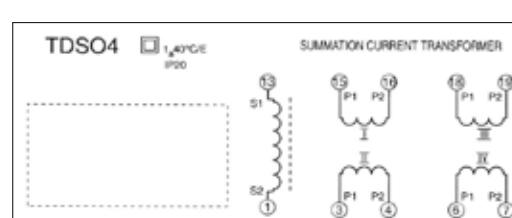

TSO2

TSO3

TSO4

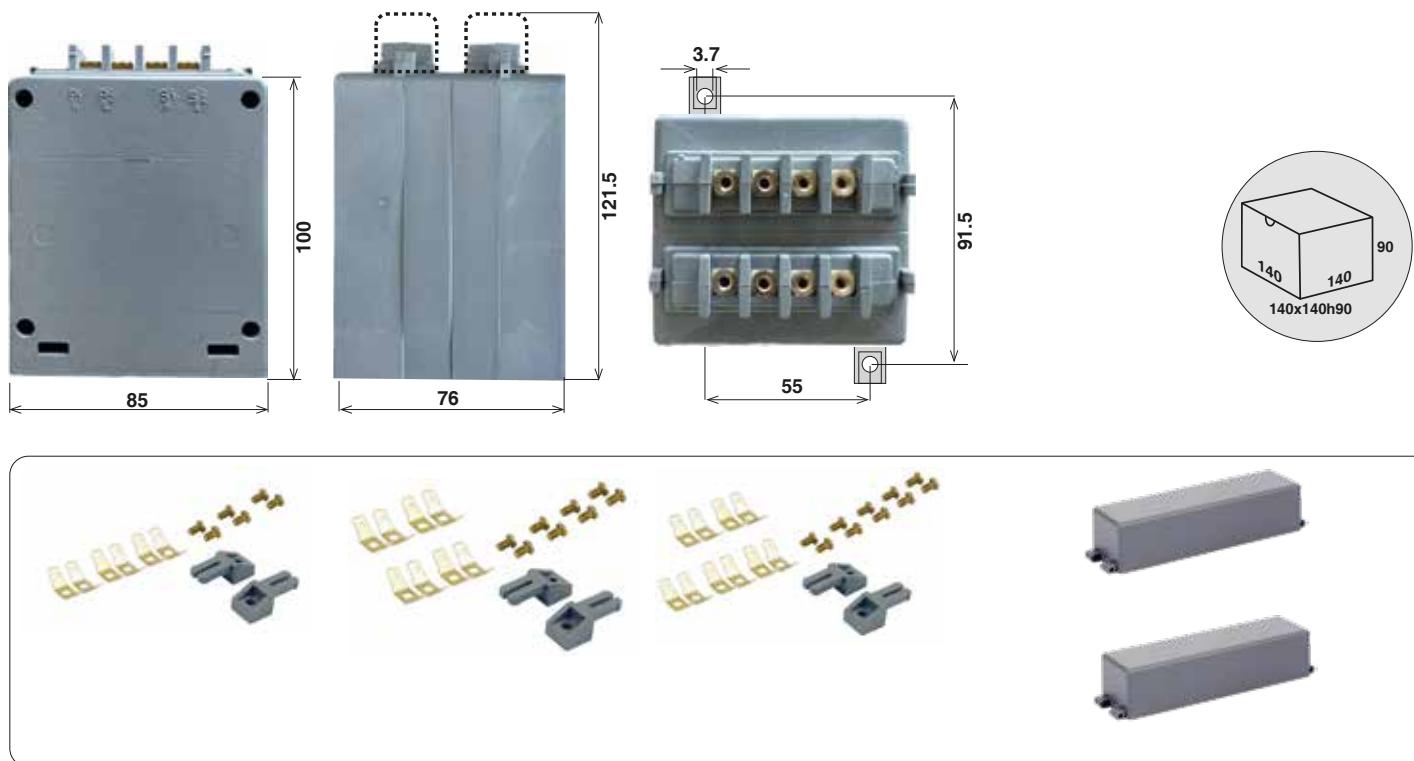

These schemes refer to the connection to one ammeter phase.

In case of a connection with two systems (ARON) scheme, use two current summation transformers and two current transformer for each phase (one for phase L1 and one for the L3 phase).

In case of a connection with three systems scheme, use three current summation transformers and three current transformers for each phase (one for phase L1, one for the L2 phase and one for the L3 phase)

TSO

Fixing to wall by brackets supplied with the transformer. Power 10VA.

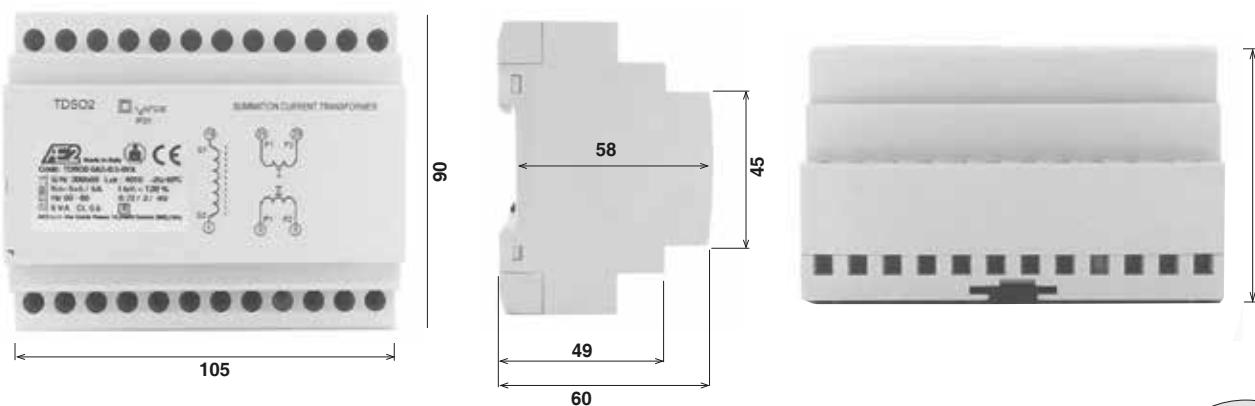

Measuring transformers

Power VA	Secondary current 5A - Class 0,5	Secondary current 1A - Class 0,5	Weight Kg
10	TSO2-5A5-0.5-10VA (Primary 5+5A - Secondary 5A)	TSO2-1A1-0.5-10VA (Primary 1+1A - Secondary 1A)	1,00
10	TSO3-5A5-0.5-10VA (Primary 5+5+5A - Secondary 5A)	TSO3-1A1-0.5-10VA (Primary 1+1+1A - Secondary 1A)	1,00
10	TSO4-5A5-0.5-10VA (Primary 5+5+5+5A - Secondary 5A)	TSO4-1A1-0.5-10VA (Primary 1+1+1+1A - Secondary 1A)	1,00

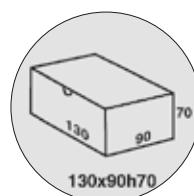

TDSO

DIN rail fixing, dimensions 6 modules. Power 6VA.

Measuring transformers

Power VA	Secondary current 5A - Class 0,5	Secondary current 1A - Class 0,5	Weight Kg
6	TDSO2-5A5-0.5-6VA (Primary 5+5A - Secondary 5A)	TDSO2-1A1-0.5-6VA (Primary 1+1A - Secondary 1A)	1,00
6	TDSO3-5A5-0.5-6VA (Primary 5+5+5A - Secondary 5A)	TDSO3-1A1-0.5-6VA (Primary 1+1+1A - Secondary 1A)	1,00
6	TDSO4-5A5-0.5-6VA (Primary 5+5+5+5A - Secondary 5A)	TDSO4-1A1-0.5-6VA (Primary 1+1+1+1A - Secondary 1A)	1,00

RATIO CORRECTION TRANSFORMERS -TCRP SERIES

Range of transformers used when it is necessary to correct the transformation ratio of the main CT, to adapt it to specific needs of the measurement circuit or to recover the phase shift caused by the connection star / delta, filtering out any homopolar currents. Different characteristics can be made on request.

When ordering, specify the exact value of the primary and secondary current.

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a sachet containing a series of accessories that depending on the model, allow various types of fixations;

- The mounting on DIN rail EN 50022 is performed using the fork accessory
- The wall mounting using the two brackets
- The direct mounting on the cable or on the bar, using screws

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

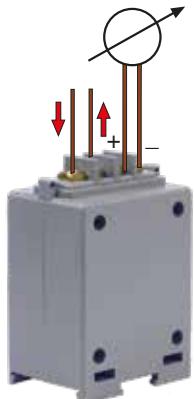

DIN rail mounting

Wall mounting

Mounting on cable or primary busbar

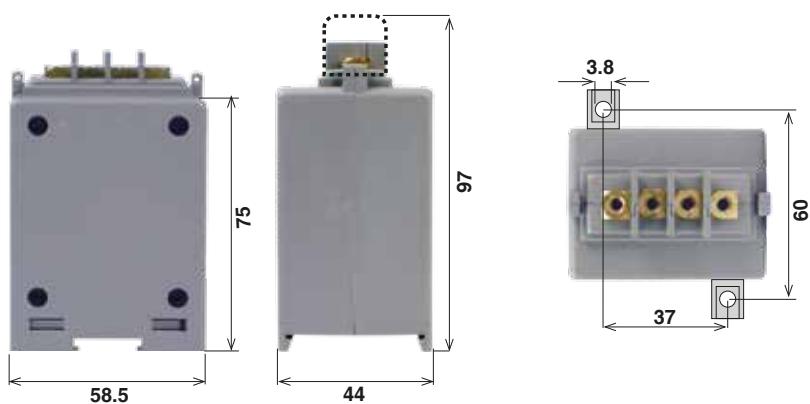

WIRING INSTRUCTIONS

Connect the cables as shown.

The cable of the primary current must be connected to the terminals, paying attention to the direction of flow as shown in figure.

SPLIT-CORE CURRENT TRANSFORMERS - TA SERIES

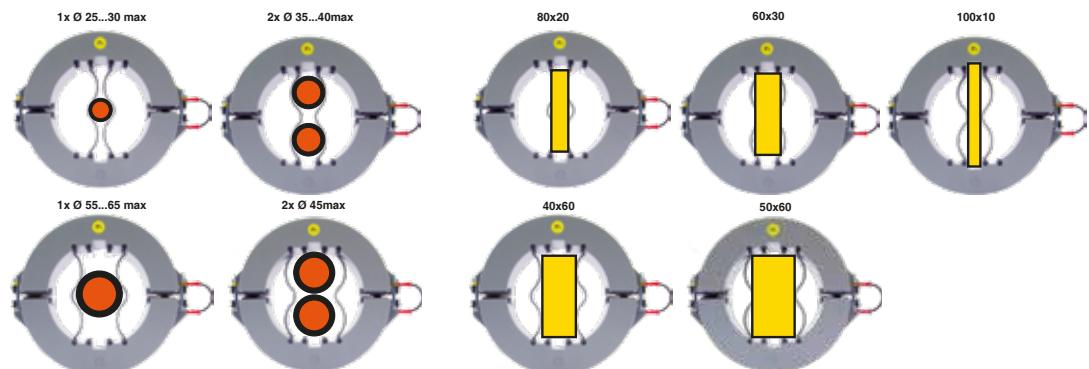

Ideal range of transformers to be installed in plants already in operation, where there is the need to be connected without interrupting the primary circuit or change the existing application.

ASSEMBLY INSTRUCTIONS TA10

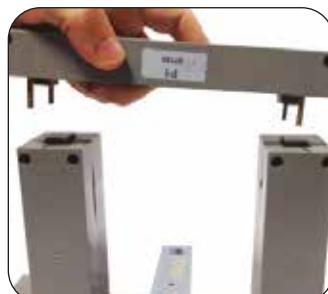

The fixing of the bar or of the cable is carried out using the two accessories ACC-TA10 supplied with the transformer, that can be placed in the various seats provided.

As appropriate to the needs of the moment, the two accessories can be inserted in their grooves as the following examples (non-binding):

ASSEMBLY INSTRUCTIONS TA28-TA26V-TA66V-TA20

The fixing of the bar is made using the accessories ACC-TA supplied with the transformer, to be positioned as shown in the picture.

1) Unscrew the four screws M4

2) Make a short circuit on the secondary winding (S1-S2) of the transformer.

3) Place the transformer on the bar or cable.

4) Pay attention to the position: the P1 side of the transformer must match the P1 side of the opening section of the core

5) For a better contact, put a conductor grease between the surfaces of the core. Be sure to match the two faces of the core, tightening uniformly the four M4 screws.

6) Check that there is no light among the two sides of the core.

7) Tighten the screws with a torque of 2.0 Nm.
The two plastic cases do not have to join.

WIRING INSTRUCTIONS TA10

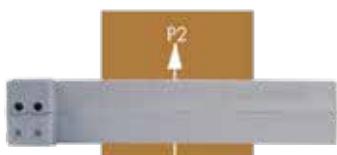

After you have properly installed the transformer around the cable / busbar (paying attention to the direction of current flow), be sure to restore the bridge with the cable supplied as shown in figure, in order to allow the circulation of the current between the two hemispheres of the CT. The connection to the load is then made using the two central fast-on terminals; the ground can

be made using the terminal S1. **It is recommended to not over tighten the clamping screws located near the core cut, to avoid the breaking of blocks in ABS. The two ends of the core that will be in contact, must be previously coated with grease conductor in order to allow a good contact.** Tightening torque of M4 screws: 2.0 Nm.

The sealable terminal cover 55PSCM-TOR is not supplied with the transformer, but only on request, being the terminals sufficiently protected against accidental contacts.

WIRING INSTRUCTIONS TA28-TA26V-TA66V-TA20

After you have properly installed the transformer around the cable / busbar (paying attention to the flow direction of the current), connect to the load using the clamps on top of the CT. The electrical connection may be made using various types of head-string as evidenced by the following pictures:

Tip head-string from P2 side of case

Without head-string from P2 side of case

Fork head-string from P1 side of case

Fast-on head-string (6.3 mm) P1 side of case

The grounding can be made using the terminal S1. The presence of the double clamp allows you to make short circuits when it is necessary to disconnect the load from the transformer.

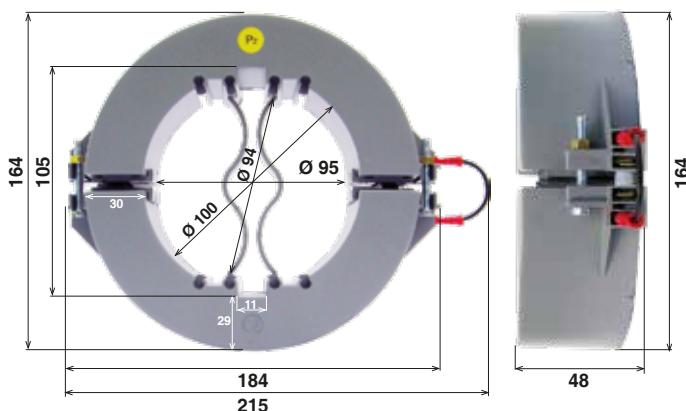

It is recommended to not over tighten the clamping screws located near the cutted core. The two ends of the core that will be in contact must be previously coated with grease conductor in order to allow a good contact.

The sealable terminal cover 55PSATCS1C is not supplied with the transformer, but only on request, being the terminals sufficiently protected against accidental contacts.

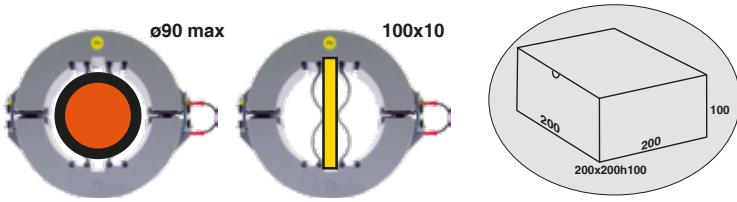

TA10

Transformer suitable for primary current by cable with a maximum diameter of 90 mm, or busbar 100x10mm. Sealable terminal cover NOT included on request: code 55PSATCS2C.

TAPED TOROIDAL CURRENT TRANSFORMERS - TAK SERIES

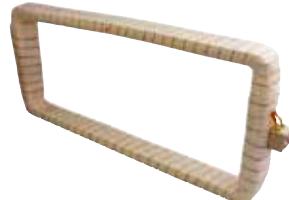

Range of transformers employed when it is necessary to detect the homopolar currents (imbalance current existing on a three-phase cable), or in all those cases in which it is necessary high performance.

The toroidal transformers, all with passing primaries, can be made under the specifications provided by the customer or based on the actual technical characteristics calculated by our engineering department; In fact, the dimensions are not fixed but detected time by time according to the required technical characteristics.

Construction methods involve the use of the toroid in AIR, GAS or OIL; the finish is made by taping cotton protected with epoxy paint.

Thanks to sophisticated testing equipment, we reach very high accuracy Classs (also 0.1%) and on request, we can issue certificates and test reports for quality assurance.

The cables of the secondary current can be in PVC, Teflon or Silicon-glass material according to the needs, with application of the grounding of the core.

The temperature of use is of -25 ° C + 40°C; if the transformers are immersed in oil, the maximum temperature of use rises to 130 ° C.

When ordering, it is essential to indicate:

- The value of the primary current which must be minimum 50A
- The value of the secondary current which must be minimum 1A
- The accuracy class- Power (VA)
- The internal diameter (the outer diameter and the depth are therefore dependent variables from the above mentioned data)**

ASSEMBLY INSTRUCTIONS

Being transformers provided with no extra accessory, the cable, busbar or panel mounting must be made in the most appropriate manner by the customer.

The customer must make the insulation between the primary and the secondary, during assembly

WIRING INSTRUCTIONS

After the transformer is properly installed around the cable / busbar (paying attention to the direction of current flow), the connection to the load is carried out using the two free cables coming out of the toroid.

CURRENT TRANSFORMERS WITH BUILT-IN TRANSDUCER - TC SERIES

Range of transformers in which the electronic circuits for conversion of the measurement and the generation of the output signal, are incorporated in the same transformer; thus enabling to obtain the ammetric and voltmetric measurement, directly on the PLC or other acquisition system.

The use of this range allows a considerable economic savings by avoiding the interposition of external transducers and double connections. If you wish to use also a reading instrument, connect in series to the PLC.

Response time 500ms - resistive load, 300 maximum at 24 VDC - Operating frequency, 50 / 60H. Different characteristics can be made on request.

ASSEMBLY INSTRUCTIONS

With the transformer it is provided a sachet containing a series of accessories that depending on the model, allow various types of fixations;

- The mounting on DIN rail EN 50022 is performed using the fork accessory
- The wall mounting using the two brackets
- The direct mounting on the cable or on the bar, using screws

These fixations must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer having to remove it.

DIN rail mounting

Wall mounting

Mounting on cable or primary busbar

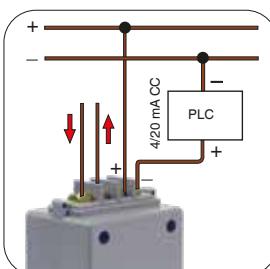

WIRING INSTRUCTIONS TC OUTPUT 4 / 20mA self-supplied

Transformers supplied directly by PLC with voltage 20VDC ... 30VDC.

If you wish to use also a reading instrument, connect in series to the PLC.

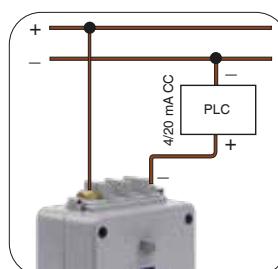

Response time 500ms - Resistive load 300 maximum at 24 VDC - Operating frequency 50 / 60Hz Different characteristics can be made on request.

Connect the cables as shown on figure

TC1A

The cable of the primary current must be connected to the terminals paying attention to the flow direction of the current as shown in figure.

OTHER TC CODES

The primary current is given by the, incorporated busbar/cable fitted into the central window of CT.

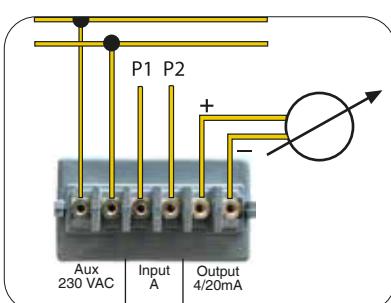

Pay attention to the flow direction of the current which must be always in direction P1->P2

WIRING INSTRUCTIONS TC...A OUTPUT 4 / 20mA with separate auxiliary power supply

Transformers with auxiliary power supply 230VAC (optional 12VDC, 24VDC, 48VDC)

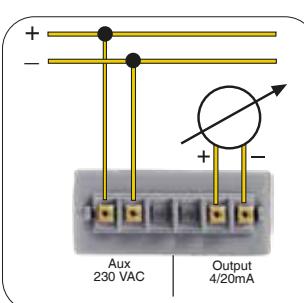

Response time 500ms - Resistive load 300 max 24 VDC - Operating frequency 50 / 60Hz Power Different characteristics can be made on request.

Connect the cables as shown on figure

TCP1A

The cable of the primary current must be connected to the terminals paying attention to the flow direction of the current as shown in figure.

OTHER TC...A CODES

The primary current is given by the, incorporated busbar/cable fitted into the central window of CT.

Pay attention to the flow direction of the current which must be always in direction P1->P2

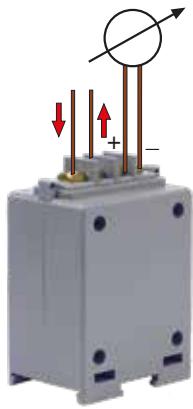

WIRING INSTRUCTIONS TC OUTPUT 20mA and 10V DC

Transformers supplied directly by PLC with voltage 20VDC ... 30VDC.

Response time 500ms - Operating frequency 50/60Hz.

Resistive load: 300 max for models with 20mA output; > 10k maximum for models with output 10V. Different features can be made on request.

Connect the cables as shown on figure

TCP1

The cable of the primary current must be connected to the terminals paying attention to the flow direction of the current as shown in figure.

OTHER TC CODES

The primary current is given by the, incorporated busbar/cable fitted into the central window of CT.

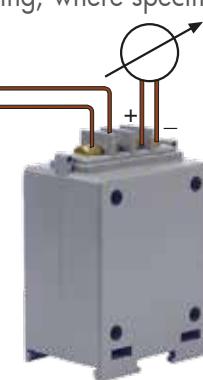

Pay attention to the flow direction of the current which must be always in direction P1->P2

Necessary wiring, where specified

The codes present in the yellow area are made using the external electronic accessory TCP1-005A-20MA-1 connected with the model TR12 (5A secondary) with corresponding primary current (eg. TR12-750A). See wiring diagram on page 60.

VOLTAGE TRANSFORMERS – TV SERIES

Construction according to CEI EN 61869-1; CEI EN 61869-3.

Case in PLASTIC-V0 and air insulation for the types TV6 and TV2; resin insulation ISEPOX for types TV10, TV12 and TV15.

Highest voltage for insulation: 0.72 kV; 1.2kV under request where possible.

Test voltage: 3 kV. Optional 6 kV where possible.

Standard secondary voltages: 100V - 100V: $\sqrt{3}$ - 110V - 110V: $\sqrt{3}$ (different voltages can be made on request) primary voltages different than those in the table can be made on request.

When ordering, specify exactly the primary and secondary voltage, power, class, frequency of use and the overvoltage required when specific use is necessary and if different from that proposed.

Regarding the overvoltage (voltage factor FT) remember that:

is 1.2Vn continuous use for all VTs with connection phase-to-phase

is 1.2Vn continuous use and 1.9x8h for all VTs with connection phase-to-neutral

ASSEMBLY INSTRUCTIONS

Together with the transformer, it is provided a socket containing a series of accessories, which depending on the model allow various types of fixing:

DIN rail EN 50022 fixing is performed using the appropriate accessory for type TV2.

Wall mounting, using the two brackets for type TV6.

Wall mounting for types TV10, TV12 and TV15 is carried out using three screws (not supplied) which must be placed on the brackets obtained directly on the mold.

These fixings must be made in the manner indicated in the figure; no special tools are required even for the release of the transformer, having to remove it.

DIN rail mounting for type TV2

Position the transformer on the DIN rail and press as shown in Figures 1 and 2.

Wall mounting for types TV2 and TV6

Using the two brackets supplied. Insert the brackets into proper places as shown in figure; then secure them to the wall with two screws (not supplied).

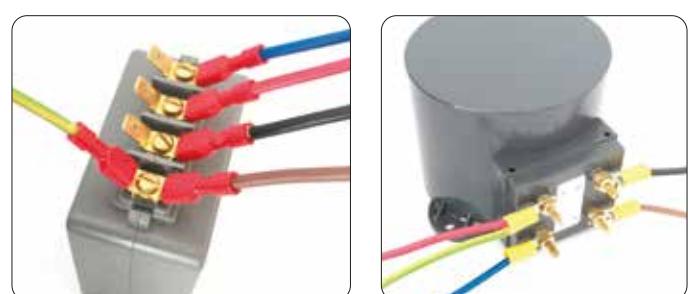

Wall mounting for types TV10, TV12 and TV15

Using three screws (not supplied) to be placed into the brackets obtained directly from the mold.

WIRING INSTRUCTION

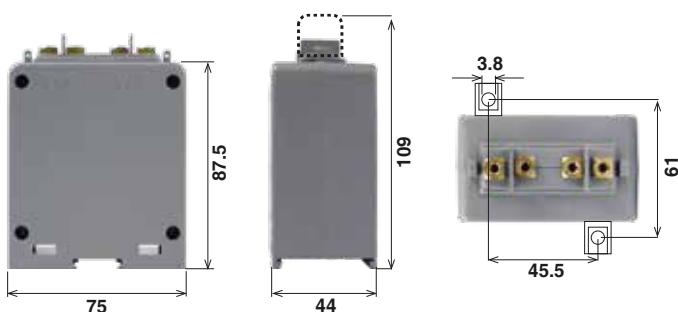

Connect the wires in the respective terminals as shown on figures. The cables of the primary voltage must be inserted in the transformer paying attention to the direction of the flow voltage, which must always be in the direction A → B. In the cables of the secondary voltage, the direction of flow must always be in direction a → b.

The terminal covers are supplied together with the transformers.

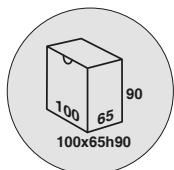

TV2

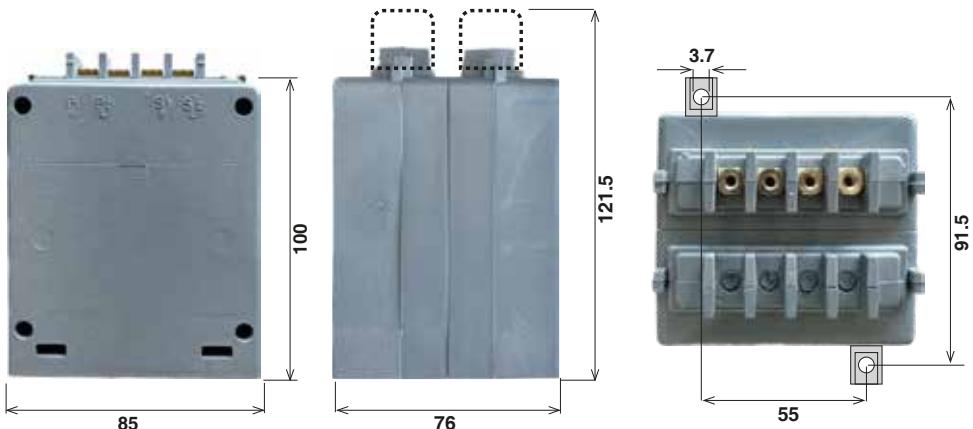

Transformer with small dimensions, 2 VA. Voltage factor FT = 1,2Vn continuous use.

**Measuring transformers**

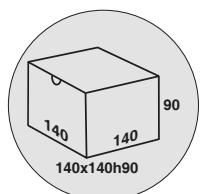

Primary voltage	Class	Power	Secondary voltage	Secondary voltage	Weight
V		VA	100V	110V	Kg
100	1	2	TV2-100V100V-1-2VA	TV2-100V110V-1-2VA	1,50
120	1	2	TV2-120V100V-1-2VA	TV2-120V110V-1-2VA	1,50
230	1	2	TV2-230V100V-1-2VA	TV2-230V110V-1-2VA	1,50
380	1	2	TV2-380V100V-1-2VA	TV2-380V110V-1-2VA	1,50
400	1	2	TV2-400V100V-1-2VA	TV2-400V110V-1-2VA	1,50
500	1	2	TV2-500V100V-1-2VA	TV2-500V110V-1-2VA	1,50
600	1	2	TV2-600V100V-1-2VA	TV2-600V110V-1-2VA	1,50

**TV6**

Transformer with small dimensions, 2 VA. Voltage factor FT = 1,2Vn continuous use.

**Measuring transformers**

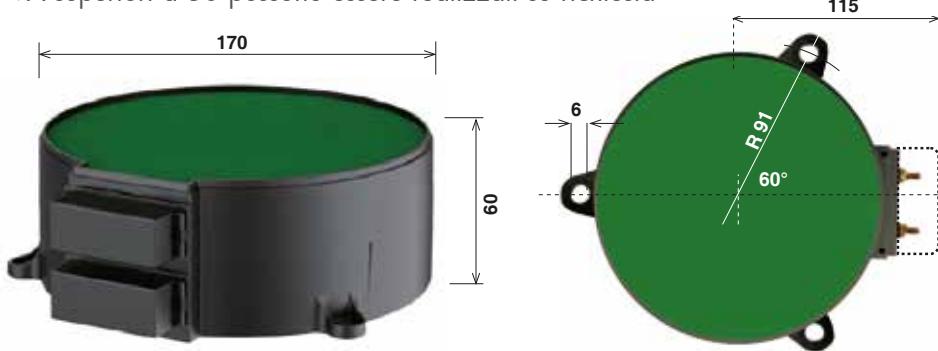

Primary voltage	Class	Power	Secondary voltage	Secondary voltage	Weight
V		VA	100V	110V	Kg
100	0,5	6	TV6-100V100V-0.5-6VA	TV6-100V110V-0.5-6VA	2,00

CERTIFICATO DI TARATURA LAT 057 14006607
Certificate of Calibration

Data di emissione:	2015/02/02	Il presente certificato di taratura è rilasciato in base all'accordatamento LAT N°057 rilasciato in accordo ai decreti ministeriali della legge n. 273/1961 che ha istituito il Sistema Nazionale di Taratura (SNT). ACCREDIA attesta la capacità di misura e di controllo, la competenza tecnologica del Centro e le vibrazioni delle basi di misura e i campioni nazionali e internazionali delle unità di misura del Sistema Internazionale delle Unità (SI).
Nome e cognome del cliente:	ARO S.r.l.	Questi certificati non può essere riprodotto in modo parziale, salvo espressa autorizzazione scritta da parte del Centro.
Indirizzo del cliente:	Via Guido Rossa, 14 - Sovico (MB)	
Numero di richiesta:	AE2-S.I.L.	
Numero di applicazione:	000695

I risultati di misura riportati nel presente Certificato sono validi soltanto applicando le procedure di taratura citate alla pagina seguente dove sono specificati anche i campioni che garantiscono la tracciabilità dei risultati del Centro e i rispettivi certificati di taratura sono validi per tutti i campioni indicati. Esiste un intervallo di validità. Esistono certificati di taratura elettronici alloggiati in database e sono validi nel momento e nelle condizioni di taratura, salvo ulteriormente specificato.

The measurement results reported in this Certificate were obtained following the calibration procedures given in the following page, where the reference standards or instruments are indicated which guarantee the traceability chain of the uncertainty, and the issued calibration certificates in the course of validity are referred as well. They relate only to the calibrated items and they are valid for the time and conditions of calibration unless otherwise specified.

La incertezza di misura dichiarata in questo documento è stata determinata conformemente alla Guida ISO/IEC 17025 e al documento EA-452. Solitamente sono espresse come incertezza estesa ottenuta moltiplicando l'incertezza tipo per il fattore di copertura che corrisponde ad un livello di fiducia di circa il 95 %. Normalmente tale fattore è pari a 2.

The measurement uncertainty stated in this document have been determined according to the ISO/IEC Guide 98 and to EA-452. Usually, they have been estimated an expanded uncertainty obtained multiplying the classical uncertainty by the coverage factor k corresponding to a confidence level of about 95% (Normal), this factor k is 2.

TEST REPORT

No. 16-0429-01 issued on 2016-06-27

Description:	Current transformer
Model/Type:	TRP2, TR4, TR43, TR5, TMA, TR12, TS20
Identification:	See par. 1 (pages 2+4)
Manufacturer:	AE2 S.r.l
Date of the tests:	from 2016-06-13 to 2016-06-15
Applied procedure:	Standards: IEC 61869-2 (2013-07) Sub clauses: 7.2 Type tests, 7.2.201 Short-time current tests, 7.3 Routine tests 7.3.1 Power-frequency voltage withstand tests on primary terminals 7.3.4 Power-frequency voltage withstand tests on secondary terminals
Laboratory reference:	LATFC02
Customer:	AE2 S.r.l.
Address:	Via G. Rossa, 14 20845 Sovico (MB) ITALY
Measured by:	
Authorized signatory:	Responsible of the Service

This report states that the measurements have been carried out using devices traceable to the Italian National Standards (Ministerial Decree no. 691/1983) and to the measurement units realized or maintained by INRIM, according to the Italian law no. 273/1961.

The results reported in this document refer exclusively to the items described and to the specified measurement conditions. The authenticity of this report is proved by the digital signature and the embossing stamp.

This document may be reproduced only in full. It may be partially reproduced only with the written approval of INRIM, to be mentioned on the same copy.
